Please Post
CONSTRUCTION X-RAY ADVISORY

X-rays are taken during construction to identify if there are services or structurally necessary reinforcing embedded in concrete floors and concrete structures prior to cutting through the concrete. This work helps avoid cutting through these elements. X-rays are also taken to verify the structural integrity of some elements, such as welds.

This work is undertaken by licensed radiographers. There is no risk to persons outside the barriers placed around the work area. Please observe the necessary precautions by not crossing the barriers installed for your protection.

X-rays will be taken in the following locations:

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

Barricades will be placed at the following locations:

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

This work will occur on the following dates:

________________________________________________________________________

This work will occur between the hours of:

________________________________________________________________________
